

Pharmacy coverage
any time.
Patient focus
all the time.

Our pharmacists operate exactly like your on-site pharmacists

With Cardinal Health Rxe-source™ Remote Order Entry Service, our hospital-trained pharmacists operate out of licensed pharmacy service centers nationwide to help you improve quality and patient care — one medication order at a time. Our pharmacists maintain a minimum of 11 ASHP competencies and are HIPAA-certified. Now your pharmacists can join your physicians and nurses on the floors as a collaborative team to drive clinical programs and provide more time with patients.

An isometric illustration of a pharmacy service center. It shows several workstations with computer monitors, keyboards, and printers. Staff members are depicted at these workstations, some looking at screens and others talking on phones. The environment is clean and professional, with a clock on the wall and a fire alarm pull station. The overall scene represents a remote pharmacy service center.

Remote Pharmacy Service Center Pharmacist:
"Happy to help. I've got the order and am reviewing it now...
The dosage is appropriate, and there's nothing in the patient's history to suggest an adverse interaction. The nurse is approved to administer."

Our remote solution enables a level of patient safety by ensuring patient medication orders are prospectively reviewed by a clinical pharmacist 24 hours a day.

Cardinal Health Rxe-source™
Remote Order Entry Service
can work for you.

Take the guided tour:
www.cardinalhealth.com/rxe-source

Order-processing turn-around time

is reduced to an average of less than

20 minutes

We intervene on medication orders

**three to
five percent**

of the time — half of which
are potential safety issues

Cardinal Health is ahead of its time,
**pioneering remote
pharmacy services
in 2003.**
